WHOLESALE SHIPPED F. O. B. SOUTHPORT

The 100 rate is 8 times the 10 rate; 50 bulbs sold at this price.

The 1000 rate is 8 times the 100 rate; 300 bulbs sold at this price.

All stock is offered and orders accepted subject to prior sales. I do not guarantee the crop; I do guarantee satisfaction. Please state if I can substitute, giving equal or better value.

We are offering for sale bulb trays with wooden sides, corner posts (for racking) and a galvanized wire screen bottom. Prices on request.

CULTURAL NOTES

Open package, store bulbs in a cool dry place until planted.

Treat bulbs before planting with bichloride of mercury, 1-1000; or the N. I. Ceresau (Lysol solution kills thrip only.)

Plant every ten days in full sunlight away from trees and shrubs, May 1st to June 15th depending upon locality.

Plant in single rows eight inches apart or double rows, one foot between rows. Dig trench six inches deep, place mixture of sheep manure and bonemeal in the bottom, cover with one inch of soil before placing bulbs; or a 4-8-10 fertilizer, 3 lbs. to 100 sq. feet, may be used (glads like humus and water).

Spray every ten days with tarter emetic, 2 tablespoons

to 3 gallons of water, using 2 tablespoons of molasses as a sticker. Commercially, I use Salp as a spray. Syringing with water early in the morning helps to keep thrip away.

Cultivate every week, or after every rain. In light soils mulching produces better blooms and bulbs, keep fertilizers away from the bulbs (causes disease). Excessive cutting of foliage weakens the bulb.

For exhibition purposes disbud to one stalk as growth appears.

Dig the bulbs four to six weeks after flowering, before the ground freezes. Cure in a warm dry room in about three weeks. Remove the mother bulb and bulblets. Store in a cool dry place, temperature 40-50 degrees, in wire bottom trays, or pack in peat moss, or sifted coal ashes.
